product serialization

PHARMA INDUSTRY FOCUS

better understanding of what the industry does, which contributes to a more focused and meaningful approach on how to strengthen efforts, activities and actions that support the development and implementation of relevant solutions.

EXPERIENCE

successful in the understanding of packaging operations and the establishment and management of packaging line functions across diverse industries. Experienced in the project management of pharmaceutical traceability projects, packaging line solutions that leverage RFID and/or 2D data matrix codes (ECC 200), end-to-end implementations, working with ERP systems, working with other partners, validation and cGMP. Flexible and pragmatic approach to problem solving, and an outstanding record of achievement in implementing new concepts, and delivering innovative business solutions.

- Open architecture approach
- Solution roadmap development
- Packaging process optimization
- Monitoring and reporting

CUSTOMER-SPECIFIC SOLUTIONS

superior industry leading pharmaceutical packaging line optimization options. They are designed to maximize return on investment by enabling clients to leverage high quality operations, minimize changes to existing packaging lines and manage factors affecting quality and costs associated with the building and maintaining of complex technical infrastructures.

ABOUT US

Each Corporate Health Initiatives Consulting's *stat-PROFiLE™* associate brings at least 10 years of project management experience in pharmaceutical supply chain, and validation. They are uniquely qualified to:
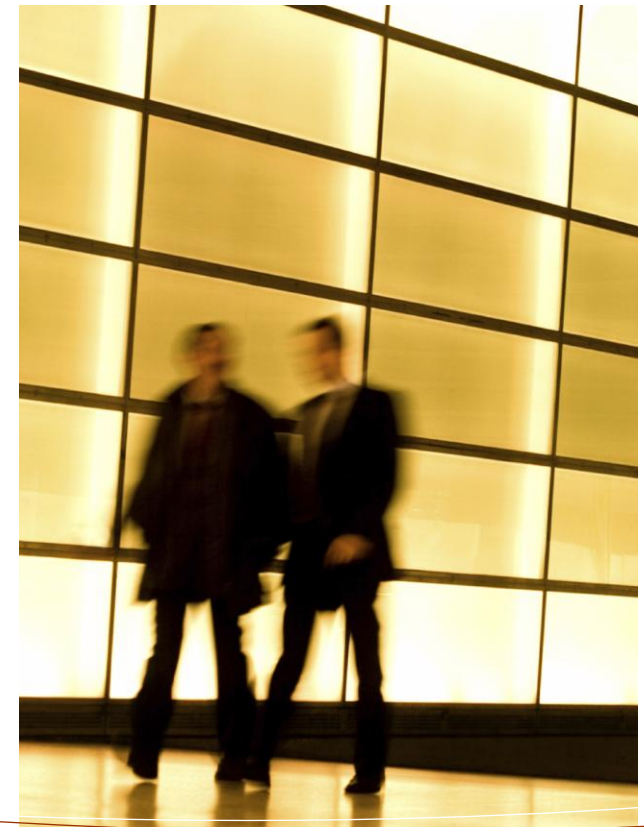

- manage effectively client projects with robust processes
- offer flexible, scalable solutions with multiple options

PROFiLE™

PHARMACEUTICAL
product serialization that works … for your business.

INCREASE COMPLIANCE

formulate and execute strategies

proven to be effective

GLOBAL PRODUCT SERIALIZATION (AUTHENTICATION) SOLUTIONS

- EVALUATION OF PACKAGING LINE CURRENT PROCESSES
- SERIALIZATION OPTIMIZATION & ASSOCIATED REPORTING
- RFP DEVELOPMENT STRATEGY
- INTEGRATION & VALIDATION

PROJECT MANAGEMENT AND PACKAGING LINE DESIGN

systematic and thoroughly tested packaging line serialization methodology that optimizes global authentication and packaging line re-engineering. It delivers solutions effectively, within scope, quality, time and budget.

Projects range from 2D/RFID e-coding, serialization, e-pedigree and traceability, to advanced reporting analytics for understanding which processes work. Key Performance Indicators (KPI's) are linked in accordance to business goals.

offer a high standard of pharmaceutical product integrity, safety and security

maintain an integrated, comprehensive and effective anti-counterfeiting strategy

flexible solutions for your business needs

DETAILED EVALUATION AND REQUESTS FOR PROPOSALS

business modeling and analysis techniques and the application of business process re-engineering methodology that reviews existing supply chain operational changes and finds ways to locate and fix incompatible elements. Identifies vendor and supplier issues such as whether there is a solution delivery risk.

ANALYSIS

- Desired Functionality
- Deployment Scale
- Projected Costs

DESIGN

- Project Team
- Phased Solution
- Partner Connectivity

VALIDATION

- User Requirements
